## COMPANY OVERVIEW

- Breakthrough platform technology for oral delivery of drugs and vaccines presently available only via injection
- Pipeline currently focused on diabetes, with potential for a variety of additional treatment indications addressing multi-billion-dollar markets
- Positive results from oral insulin (ORMD-0801) pivotal Phase 2b study
- Phase 3 studies under US FDA underway
- Oramed's lead product, oral insulin, has potential to be the first commercial oral insulin
- JV, Oravax Medical ([www.ora-vax.com](http://www.ora-vax.com)), developing oral Covid-19 vaccine

## EQUITY OVERVIEW

(as of 6/17/21)

**Nasdaq/TASE:** ORMP

**Price:** ~\$13.74

**Market Cap:** \$415.34 M

**52 Week Range:** \$2.4-\$15.17

**Avg. Daily Volume (90 day):** 661K

**Shares Outstanding:** 31.4M (as of

6/13/21)

**Cash/Investments:** >\$75M (as of 4/13/21)

## BETTER WAY TO TREAT DIABETES

**1 in 11 adults  
on the planet has  
diabetes**

**1 healthcare  
in 8  
is spent on diabetes**

every  
**6 SECONDS**  
1 adult dies  
from diabetes  
4M deaths in 2017

## INVESTMENT HIGHLIGHTS

### Breakthrough Platform Technology Delivers Injectable Drugs Orally

Oramed's unique Protein Oral Delivery (POD™) technology enables small proteins such as insulin to travel through the gastrointestinal tract and into the bloodstream. This method is more natural and should eliminate many of the negative side-effects of injection delivery. The oral administration of current injection-only therapies for conditions including diabetes should offer clear benefits including increased compliance and safety, fewer side effects and greater comfort for patients.

### Addressing \$70 Billion Market with Oral Formulations

Roughly \$70 billion worth of drugs and vaccines are currently delivered via injection. This includes the diabetes market where \$24 billion of insulin and \$6 billion of GLP-1 analogs were sold globally in 2017. The vaccine market size was approximately \$33.6 billion in 2017 and is expected to surpass \$103.6 billion by 2028.

### Oral Treatment has the Potential to Curb Progression of Type 2 Diabetes

ORMD-0801 has the potential to create a new paradigm in the treatment of type 2 diabetes by orally delivering insulin at an earlier stage of treatment. Earlier treatment can potentially slow disease progression and delay late-stage complications. Oramed successfully completed a 90-day HbA1c study of ORMD-0801, which met its primary endpoint achieving a statistically significant reduction of HbA1c. Oramed is initiating Phase 3 studies under the FDA, and is pursuing a Biologics License Application (BLA) regulatory pathway for ORMD-0801 which would grant a full 12 years of marketing exclusivity, if approved.

### Oral Covid-19 Vaccine in Development

Oravax Medical, based on Oramed's and Premas Biotech's cutting edge technology is developing an oral Covid-19 vaccine. Oravax's COVID-19 oral vaccine candidate benefits from being a virus like particle (VLP) triple antigen vaccine that targets three structural proteins, which should make it a better candidate for protection across emerging mutations of the coronavirus.

## 2021 ANTICIPATED UPCOMING MILESTONES

ORMD-0801: Oral Insulin	➤ Phase 3 in diabetes patients ➤ NASH trial
ORMD-0901: Oral GLP-1	➤ Bioavailability study in diabetes patients
Oral Leptin	➤ Exploratory trial
Oravax Medical	➤ Clinical trial for oral Covid-19 vaccine
